A pause with a job.

A useful pause is specific. It can close a decision, name the next step or give a half-finished thought somewhere to wait. It is easier to return when you know what returning means.

This issue follows an authored week of work blocks. The numbers are synthetic, the conversation is fictional and the exercises are original prompts. They are here to make the editorial argument inspectable, not to claim a study took place.

Start with the story, check the model, then try one small handover note.

Before you leave the task.

An unfinished task can still have a clear ending for today. Write down the point you reached, the decision you need and the next action small enough to begin without another planning session.

A note such as “continue the proposal” asks tomorrow’s reader to reconstruct everything. “Compare the two opening paragraphs, then send the preferred version for review” gives them an entry point.

The pause does not promise faster work. It makes the state of the work visible.

Leave a landing place.

A landing place names the current file, what changed and what happens next. Keep the version unambiguous so the reader opens the right attachment.

Identify the decision owner. Write as if handing the task to someone who has not been thinking about it all afternoon.

The point is to make the thread easier to find.

A week in 100 blocks.

Authored model / five days / twenty 15-minute blocks per day. These blocks cover a selected five-hour portion of each model day, not the full working day.

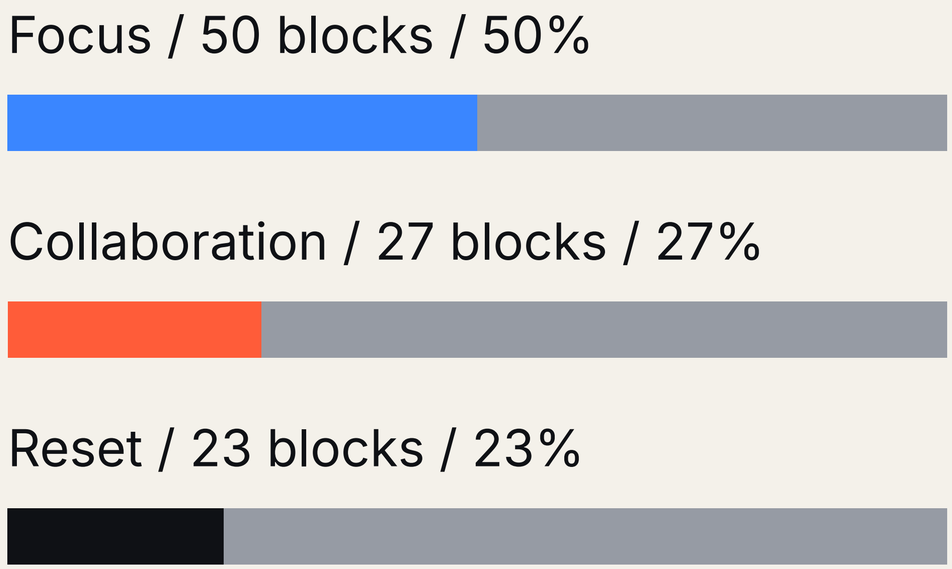

Every daily column totals 20 blocks. Stacks share a zero baseline.

Read the denominator.

The model contains 100 blocks, totalling 25 hours. Focus takes 50 blocks, collaboration 27 and reset 23. Percentages use all 100 blocks as their denominator.

These are planned allocations, not observed behaviour or a measure of productivity. Moving a block between categories changes the picture; it does not establish an outcome.

Shared scale: 0 to 100 blocks / 25 total hours

What needs a meeting?

An authored conversation with Nia Shore, a fictional studio coordinator.

FN: What would you decide before inviting people?
NS: The question we need to answer. If we cannot name the decision, we have not yet made a useful invitation.

FN: What belongs in the invitation?
NS: The question, the material to review and who can make the decision. Give people enough context to know why they are there.

Close the loop.

FN: What happens when the discussion ends?
NS: Name the decision, the owner and the next check. If the decision is still open, say what is missing and who will find it.

FN: What should the record leave out?
NS: The transcript of every turn. A short decision note can preserve the useful result without pretending to be a complete memory of the room.

Original fiction, not an interview transcript or a claim about a real studio.

Write a return note.

01 / State the current position.
Name the file and the part you reached. Use a location the next reader can open.

02 / Separate done from open.
Record the decision already made and the question that still needs attention.

03 / Choose the first action.
Make it concrete: compare, check, draft or ask. Give it an owner when more than one person is involved.

Try it on one task.

CURRENT FILE
Proposal / version 03 / shared working folder

DONE
Two openings drafted; supporting figures checked.

OPEN
Which opening explains the reader benefit more clearly?

NEXT
Review both openings, select one and record the reason.

A clear entry point.

The next reader can find the file, understand its state and begin one action.

Back to the steps

Three reusable prompts.

A return note, a decision record and an invitation check. Copy the questions into your own working document; no form submission is required.

RETURN NOTE

Where is the current file?
What changed?
What is the first action?

DECISION RECORD

What was decided?
Who owns the next step?
When will it be checked?

INVITATION CHECK

What question needs an answer?
What should people read?
Who can decide?

Reading and subscriptions.

This edition is a portfolio publication with no live subscription service. The subscription button on the events page leads here so it explains its status without collecting personal details.

For practical PDF reading help, the two links below open the official Firefox and Evince guides. These sources document viewers; they are not evidence for the synthetic work-block model.
