Linden Court

Space for the life you lead.

RESIDENCES / FOUR LAYOUTS

Printed window effect / interior reference

A home, before an address.

Linden Court is imagined as a compact residential court with a sheltered garden at its centre. The aim is straightforward: a clear threshold from street to home, rooms that support different routines, and shared spaces that are easy to find.
This guide lets you compare four layouts using the same scale, labels and area conventions. Start with your daily needs, then check the plan and specification together.

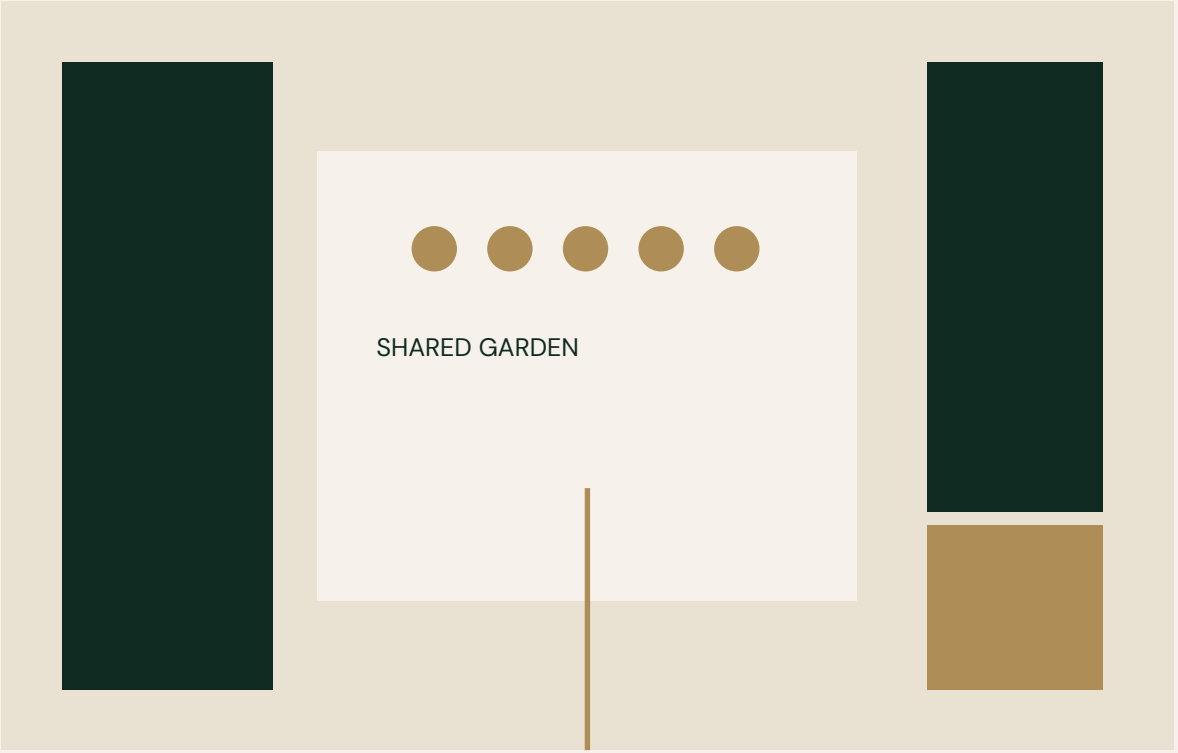

72-180

m² / four diagram footprints
One shared garden.

One garden. Three edges.

The site diagram shows the proposed relationship between the entry court, two residential wings and the shared garden.
A pedestrian route connects the entrance to each lobby without crossing the service bay.
This is a fictional site: the drawing describes an arrangement rather than a surveyed location. The arrangement is schematic and is not to scale.

West wing / garden / east wing / service

ENTRY COURT

Close to what matters.

The neighbourhood model places useful daily destinations around the court: a grocery shop, a small park, a library and a transit stop. The distances are illustrative routes measured within this fictional district.
A neighbourhood should support ordinary routines as much as special occasions. The map gives equal weight to errands, quiet walks and connections beyond the immediate streets.

Fictional district / route model

A shorter everyday route.

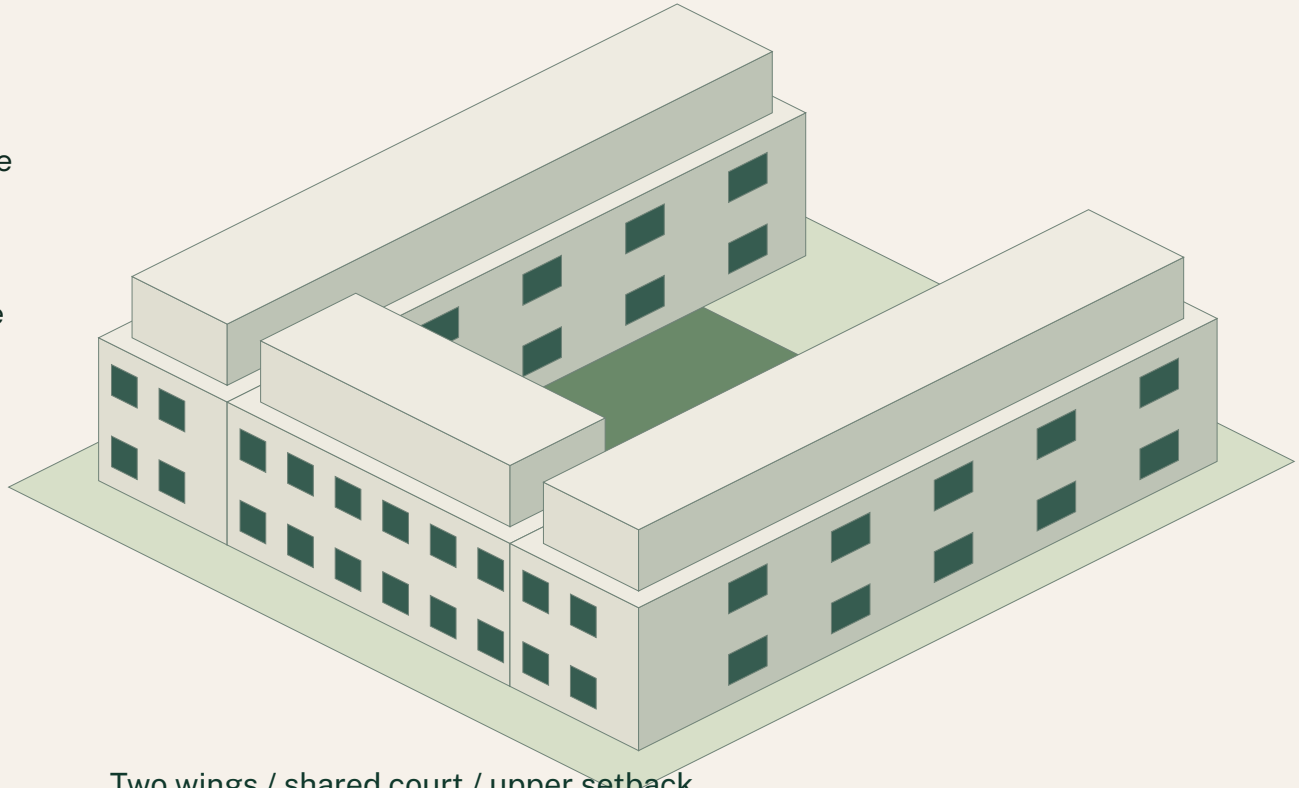

Grocery / 250 m. Transit / 400 m. Park / 600 m. Library / 750 m.
These are model route lengths, not claims about a real address. Step-free conditions, opening hours and transport service would need verification for an actual development.

Scale: longest route = 750 m. Model distances.

A building with a quiet centre.

Two residential wings frame the shared garden while keeping the entrance legible from the street. Setbacks distinguish the upper level; repeated window bays give the elevations a calm rhythm.
The diagram follows a simple hierarchy: a durable outer envelope, a lighter inner garden edge, and a clear public-to-private threshold.

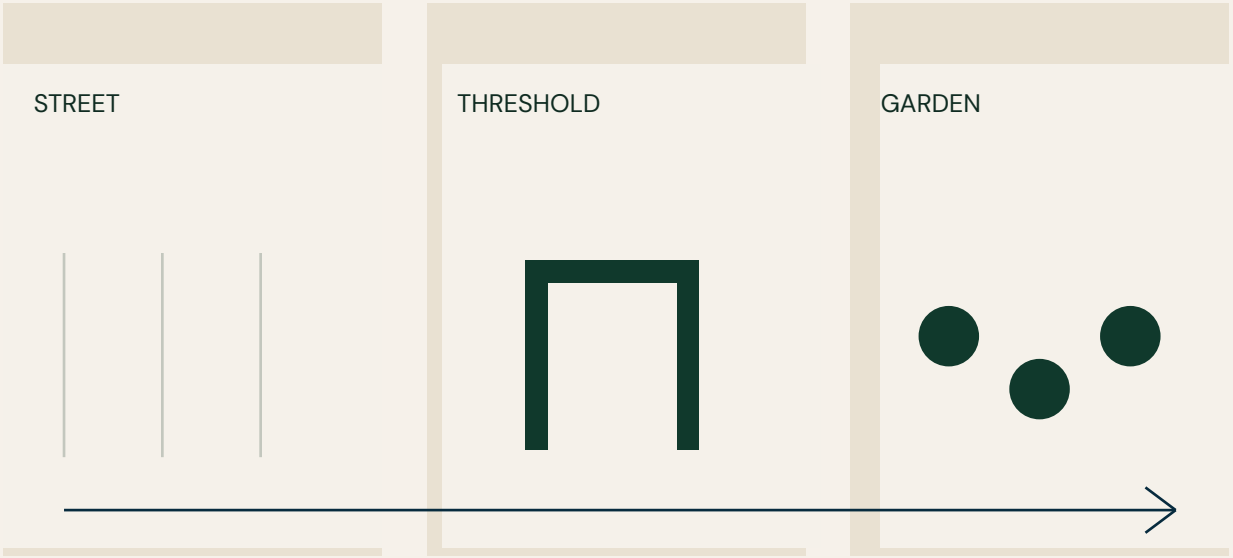

Two wings / shared court / upper setback

Native axonometric study / not to scale

Light has a route.

The court brings an open outlook to the shared circulation. Within each home, the living room and kitchen occupy the larger upper band of the diagram, while bedrooms and entry spaces sit in the lower band. The orientation diagram is a planning illustration. Daylight, ventilation and energy performance require a real site, detailed design and specialist assessment.

Public edge / shared arrival / private outlook
Concept sequence, not an environmental simulation.

Rooms that welcome change.

Illustrative interior photograph / Jarosław Ceborski / CC0

A working kitchen, not a showpiece.

The kitchen detail makes storage and everyday use visible. Pale cabinetry and warm timber connect the detail to the living-room reference; the material studies propose a restrained palette.
Material samples on this page are native colour studies. They indicate a direction, not a measured finish, product warranty or supplier specification.

STONE TONE

METAL ACCENT

FOREST

One bedroom. A generous first room.

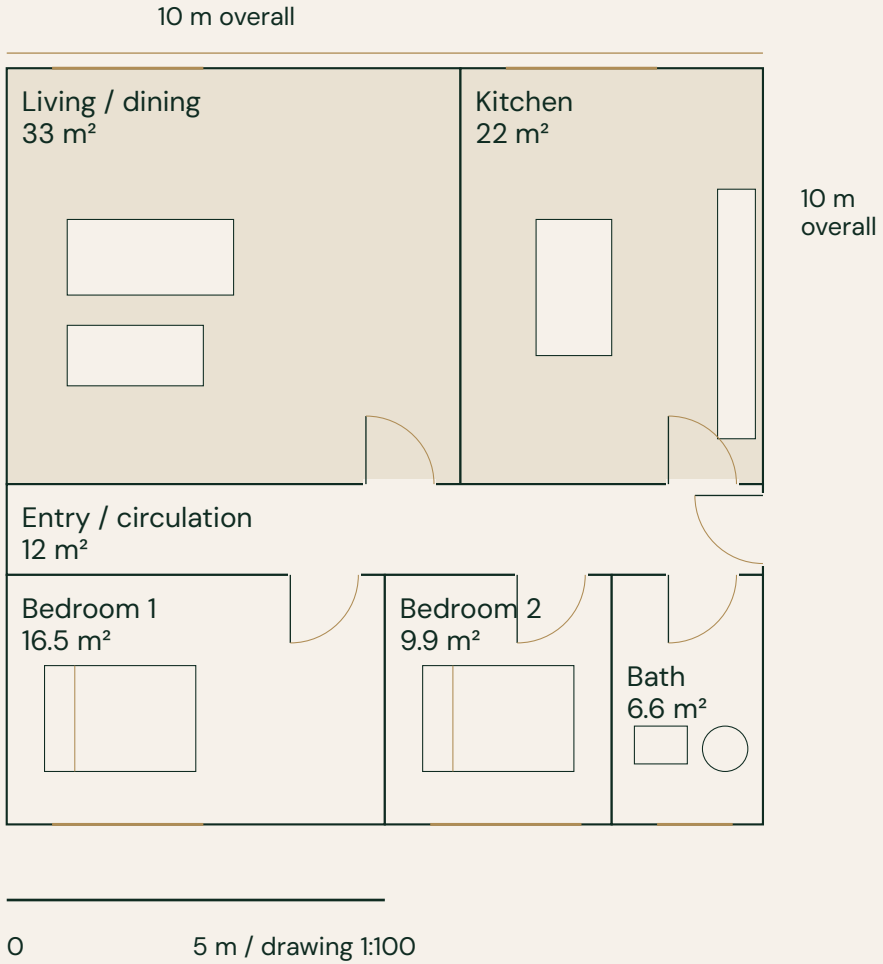

A wide living and dining band makes the one-bedroom layout adaptable. The bedroom sits behind the quieter edge of the plan. A shared entry corridor connects the living spaces, bedroom and bath. Compare the 72 m² diagram footprint with the 8 m² terrace allowance. Areas are schematic: no construction wall build-up has been deducted.

72 m² footprint
1 bedroom / 8 m² terrace

Two bedrooms. Two useful choices.

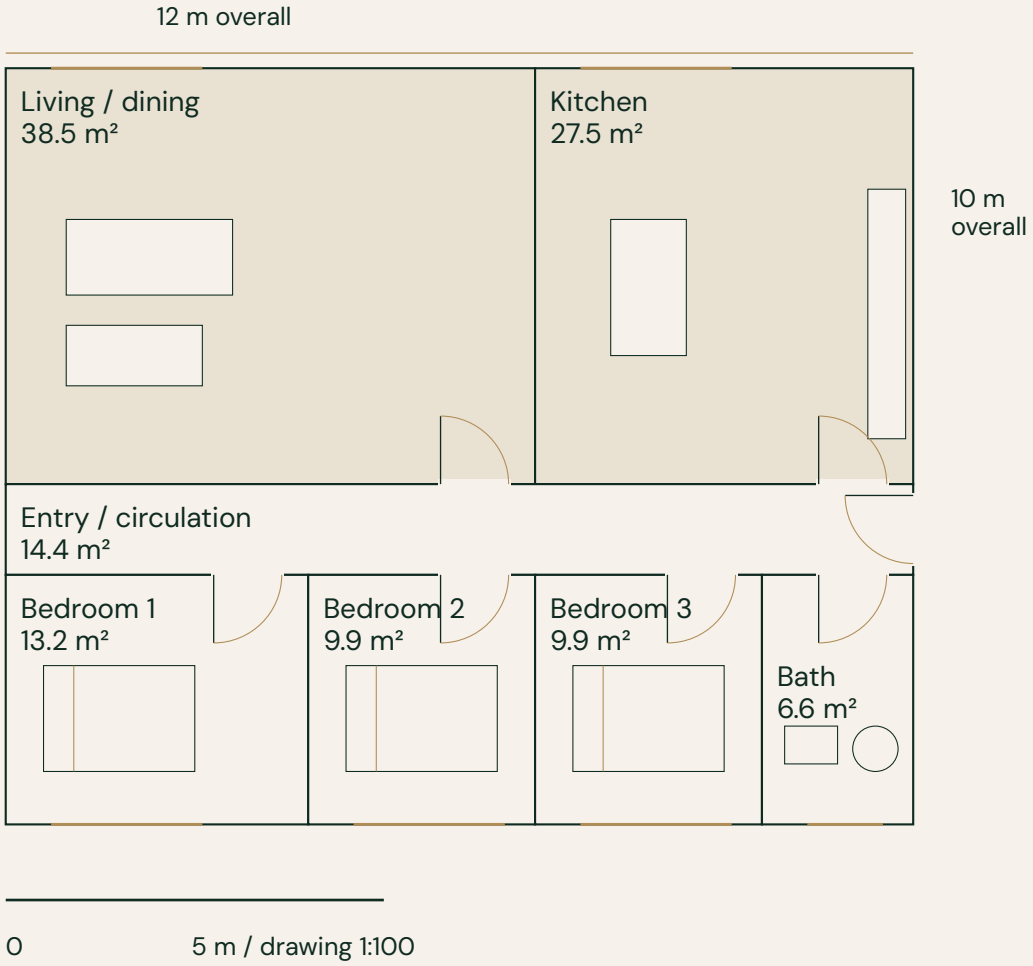

The second bedroom can support a guest room or dedicated study. Living and kitchen zones remain separate in the comparison drawing, so their proportions are easy to assess.
The 100 m² footprint is split across six labelled zones. Each room area comes directly from its rectangle in the native plan.

100 m² footprint
2 bedrooms / 12 m² terrace

Three bedrooms. One shared centre.

Three bedrooms share the lower band, leaving the living and kitchen zones as the common centre of the home. A corner position offers an illustrative two-edge outlook.
The 120 m² footprint and 18 m² terrace allowance are separately stated. Circulation in a detailed design would need to be resolved beyond this comparative diagram.

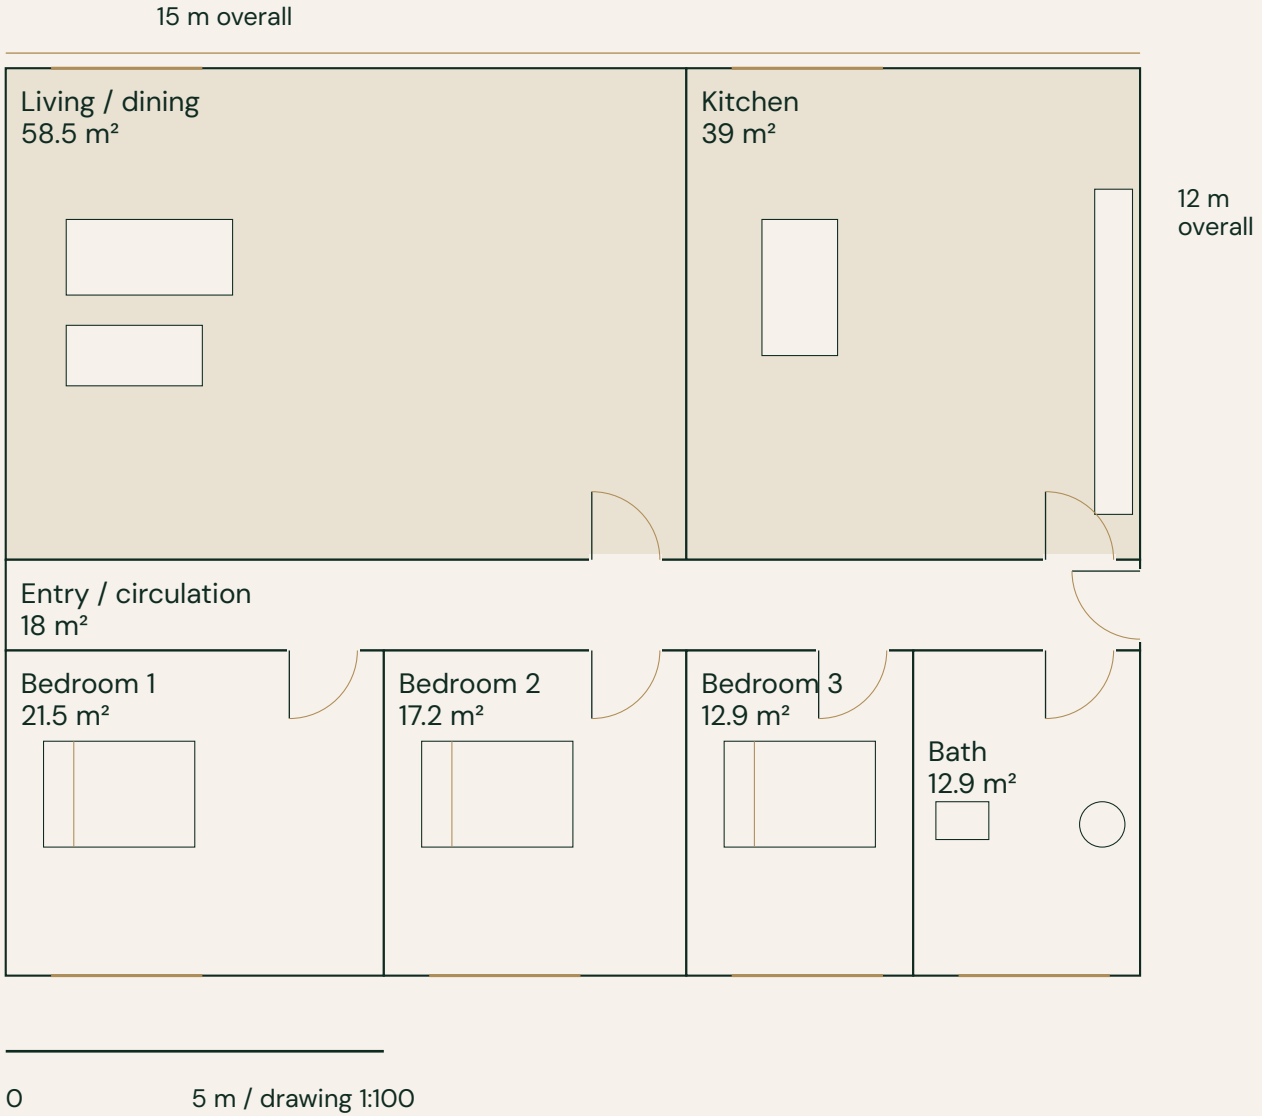

120 m² footprint
3 bedrooms / 18 m² terrace

The upper garden.

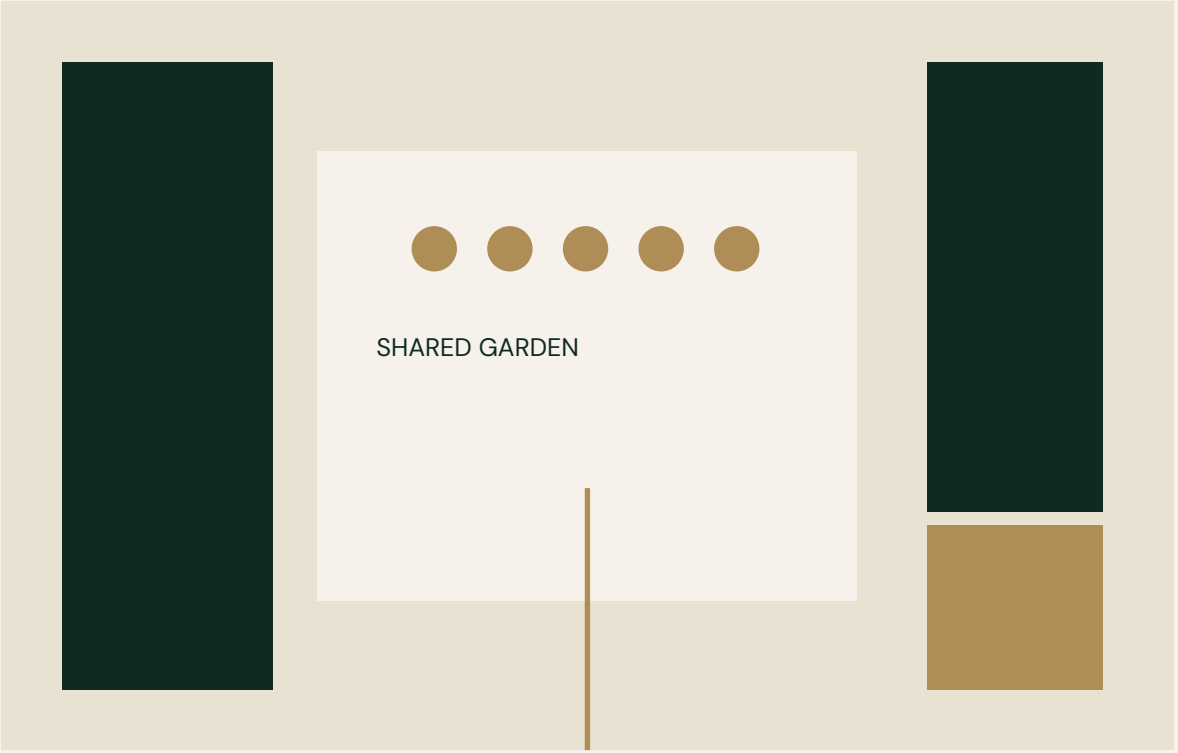

The largest layout adds a wider living band and a 30 m² terrace allowance. Three bedrooms share the lower band with the compact service zone.
The 180 m² figure is the diagram footprint, not a certified saleable area. A terrace is listed separately and is not included in the internal comparison.

180 m² footprint
3 bedrooms / 30 m² terrace

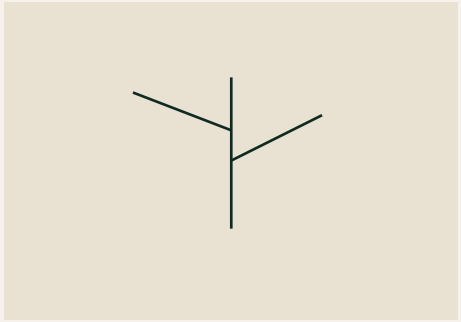

Shared space, with a purpose.

The garden is the common room outdoors. A reading lounge offers a quieter shared setting, while cycle storage and a parcel room support daily arrivals.
The amenities schedule is a proposed programme. Access rules, staffing and operational charges remain outside this fictional residential model.

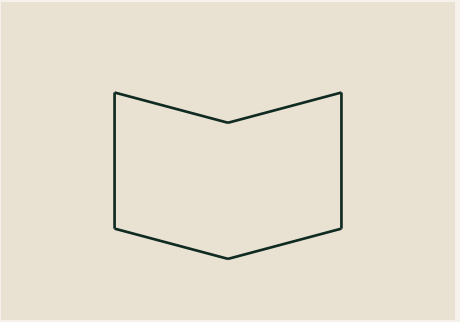

The small routines count.

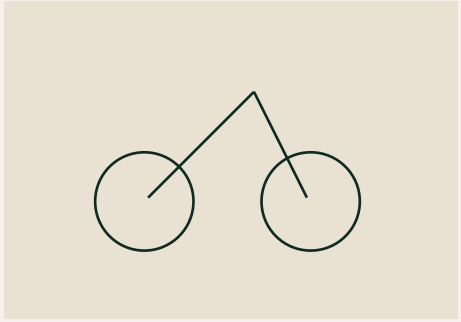

Garden / a planted shared court with a loop path.
Reading lounge / a quiet indoor room beside the lobby.
Cycle room / secure storage near the entrance.
Parcel room / a dedicated delivery collection point.
Each native icon uses the same stroke language and appears beside its named function.

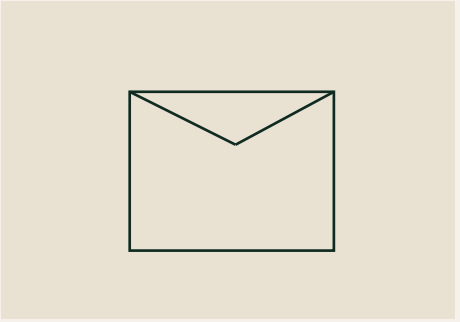

GARDEN

CYCLES

PARCELS

Compare the four homes.

Use the same area convention across all four plans. The diagram footprint includes the full outer rectangle; it does not deduct partitions or establish a regulated measurement standard.
Room areas reconcile to the stated footprint. Terrace areas are separate model allowances. All dimensions are in metres.

Layout	Bedrooms	Footprint / m²	Terrace / m²
A	1	72	8
B	2	100	12
C	3	120	18
P	3	180	30

Diagram footprint / m² / same zero-based scale

LOOKUP / Three bedrooms and at least 18 m² outdoors: compare C on p12 with P on p13.

A considered finish.

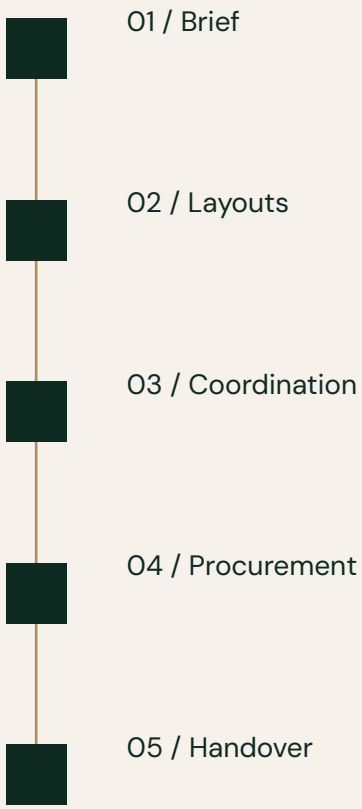

The proposed interior direction uses pale walls, warm timber tones and restrained metal accents. Wet-area floors and work surfaces need suitable product performance for the intended use. This schedule distinguishes a visual direction from a construction requirement. No stock photograph is a promise of a supplied finish.

Element	Visual direction	Confirm before construction
Walls	Warm pale neutral	Finish and maintenance
Cabinetry	Timber tone	Substrate and hardware
Worktop	Pale mineral tone	Durability and edge detail
Wet areas	Restrained texture	Slip and water performance
Metalwork	Brass colour accent	Finish and corrosion rating

From brief to handover.

Linden Court is a fictional development by Linden Court Studio, a project identity used for this publication. The programme is a proposed sequence rather than a dated delivery commitment.

01 Establish the site brief. 02 Compare and refine layouts. 03 Coordinate structure and services. 04 Confirm materials and procurement. 05 Inspect and hand over. Real delivery requires planning approval, technical coordination and verified contracts.

Bring your daily life to the plan.

Before an enquiry, mark the layout that fits your needs and list the routines it must support. How many rooms need to work independently? Which items need storage? How often will guests stay?
Preferred layout: A / B / C / P
Bedrooms required: ____ Workspace required: ____
Questions about access, maintenance or outdoor space:
_____
No operational sales contact has been supplied for this portfolio project.

YOUR COMPARISON NOTES

Linden Court

Start with how you live. Compare the plan. Check the schedule.

Interior reference photographs: Jarosław Ceborski / CC0. Photography is illustrative; the four units and development are fictional.
Publication design, original copy and native drawing: Ayobami.
