Building with discipline.

Calloway Holdings

2026 revenue / £m

Context images / chuttersnap, Karsten Würth, Adi Goldstein

Logistics	£480m
Energy	£360m
Services	£280m

OVERVIEW

The year in focus.

A reading route from performance to the numbers behind it.

£1,120m
Revenue

£220m
Operating profit

£256.25m
Closing cash

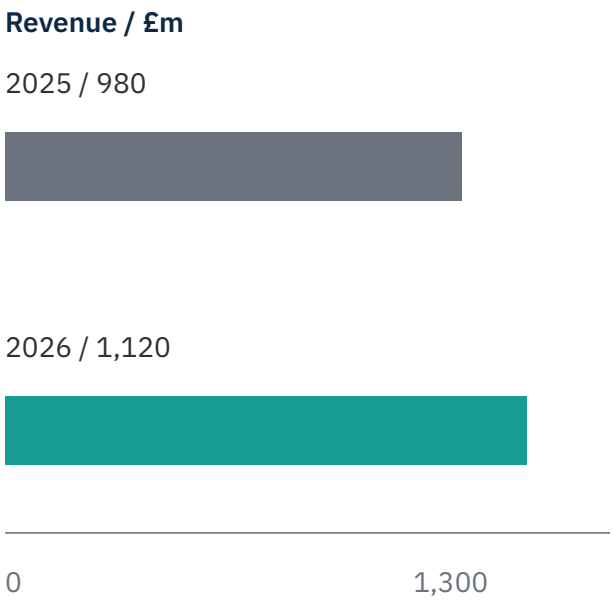

This annual report presents a fictional diversified group. Its financial and operating values were constructed from one synthetic model. The statements are internally reconciled examples, not audited accounts or investment research. Start with the performance comparison, then follow the three divisions. The financial section begins on page 36 and explains how the headline measures connect to the statements and notes.

Performance	3
Chair and CEO letters	4
Strategy and business model	8
Divisions	14
People and sustainability	26
Governance	32
Financial statements and notes	36
Shareholder information	46

PERFORMANCE

Growth needs context.

Revenue rose faster than operating profit.

Measure	2025	2026
Revenue	980	1,120
Operating profit	200	220
EBITDA	260	300
Cash	220	256.25
Capex	140	180

Group revenue increased from £980m to £1,120m. Operating profit increased from £200m to £220m. The different rates matter: additional sales did not translate into an equivalent rise in operating profit.

Operating margin moved from 20.4% to 19.6%. The report therefore separates growth, margin and cash rather than presenting a single success metric. The divisional comparisons explain the mix; Note 2 reconciles all three businesses.

CHAIR LETTER

A year of deliberate choices.

Mara Calloway / Chair

Dear shareholders,
The central decision in this illustrative year was how to grow without losing control of the balance sheet. We increased capital spending to £180m while maintaining a clear view of operating cash and borrowing. Revenue growth gives the group more room to invest, but the margin comparison reminds us that scale alone is not enough.
The board’s role is to test the reasons behind each investment, ask how the business will measure its progress and make sure someone is responsible for the next review. That discipline is particularly important when divisions work at different speeds.

Scale alone is not enough.

Logistics has a mature operating base and a regular flow of customer work. Energy carries a larger share of the investment programme. Services provides the people and systems that help customers run their operations. These businesses share a capital framework, but they do not share an identical risk profile.
Our reporting approach keeps those differences visible. The four-page division sections show the financial comparison, an operating model and the questions management should answer next. The statements then bring the group back together without concealing the parts.

CHAIR LETTER

Accountability stays visible.

Chair’s letter / continued

£256.25m

Closing cash / authored model

£380m

Gross borrowing / authored model

The board reviews the link between the narrative and the financial statements. A claim about performance needs a measure, a period and an explanation. The same principle applies to people and environmental information. Where a result is based on an assumption, the assumption belongs beside the result.

The example shows closing cash of £256.25m and gross borrowing of £380m. Both figures matter. Cash increased, but so did debt; the report makes that relationship visible in Note 4 rather than using cash alone as proof of financial resilience.

Our proposed dividend in the model is £40m, equal to the prior-year amount. The decision illustrates a balance between distributions and retained resources. Profit of £146.25m adds to equity, while the dividend reduces that addition to £106.25m. The movement is shown on page 40.

I thank the teams represented by this fictional group for the care they bring to the work. The next phase should be judged by reliable execution, useful information and disciplined capital decisions, not by the number of initiatives announced.

Mara Calloway
Chair

CEO LETTER

Execution before expansion.

Jon Bell / Chief Executive

Dear shareholders,

The group entered the year with three practical priorities: protect the reliability of existing work, invest where capacity is constrained and improve the information available to managers. The model records £1,120m of revenue and £220m of operating profit. It also records a lower operating margin, which means the growth story needs a closer reading.

In Logistics, revenue increased to £480m and operating profit to £108m. Energy reached £360m of revenue and £70m of operating profit. Services contributed £280m and £42m respectively. These totals reconcile to the group statements; there is no separate unallocated corporate line in this simplified model.

The investment programme is concentrated rather than spread equally. Energy receives £80m, Logistics £75m and Services £25m. This allocation reflects the fictional capacity priorities used to construct the report. It is not a forecast or an estimate of real market conditions.

The increase in employees from 1,200 to 1,380 creates a further obligation to strengthen onboarding and supervision. Training hours increased from 18,000 to 24,840. The people section states the denominator explicitly, so readers can distinguish total hours from hours per employee.

Investment allocation / £180m

Logistics £75m / Energy £80m / Services £25m

CEO LETTER

The next operating review.

Chief Executive’s letter / continued

DELIVERY

Keep handoffs and exceptions visible.

MARGIN

Explain the cost of each increment of growth.

CASH

Review inventory, receivables and funding together.

Our next review will focus on delivery, margin and working capital. Each division should be able to explain what changed, what remained unresolved and what management will do before the following review. A common dashboard supports those questions without forcing different businesses into the same operating vocabulary.

Operating cash of £196.25m funds most of the £180m investment programme in this example. Financing and distributions then explain the movement to closing cash. Readers should use the cash-flow statement on page 39 alongside profit, rather than treating the two as interchangeable.

Jon Bell
Chief Executive

STRATEGY

One framework. Three operating businesses.

Allocate capital to a defined need, then review the result.

1 **Understand the need**

2 **Allocate the resource**

3 **Inspect the result**

The group model combines logistics networks, energy assets and operational services. Its strategy is a sequence of decisions: understand the customer requirement, identify the capability needed, allocate resources and inspect the outcome.

The framework does not turn every project into a growth project. Maintenance, workforce capability and reporting controls also compete for resources. Page 11 shows how the synthetic capital programme is divided.

STRATEGY

Three priorities, three tests.

An investment case needs a useful decision rule.

CONTINUITY	PRODUCTIVITY	VISIBILITY
What existing work must remain reliable?	Which constraint does the spending remove?	Who will inspect the result, and when?

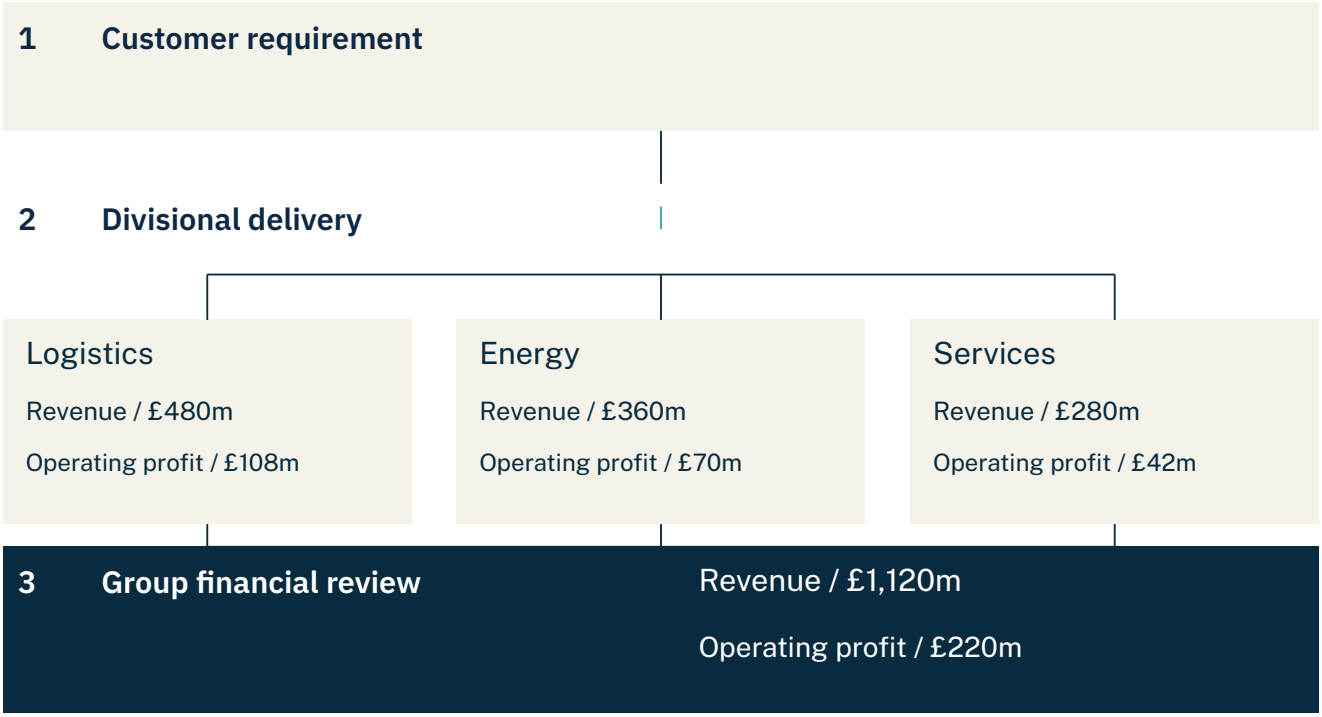

The first priority is continuity: existing operations should remain dependable while new capacity is added. The second is productivity: additional resources should remove a defined constraint. The third is visibility: management should be able to inspect performance with timely, comparable information.

The tests below are practical reporting questions rather than numerical promises. The next annual comparison should show whether capacity, operating cost and cash generation changed together.

BUSINESS MODEL

From requirement to repeatable delivery.

Three divisions, one accountable reporting chain.

Customers bring a need. Divisions organise assets, people and suppliers around that need. Delivery creates revenue and operating cost. Review then identifies what should be maintained, changed or stopped.

The native diagram is a conceptual business model, not a legal organisation chart. It shows where operating decisions connect to group reporting. No external assurance or certification is implied.

CAPITAL ALLOCATION

Invest where the constraint is understood.

Capital expenditure increased from £140m to £180m.

Measure / £m	2025	2026
Logistics	60	75
Energy	50	80
Services	30	25
Group capital expenditure	140	180

2026 allocation / £180m

Energy accounts for £80m of the current programme, compared with £50m in the prior year. Logistics receives £75m and Services £25m. The allocation totals £180m and matches the cash-flow statement.

An allocation is not a completed outcome. Each division still needs to demonstrate readiness, delivery and the effect on ongoing work. Note 3 connects the programme to the movement in tangible assets.

RISK

Risk begins with a specific exposure.

Five questions for the operating review.

Exposure	Response	Review evidence
Delivery handoff	Named operating owner	Exception record
Capital execution	Readiness checkpoints	Scope and cost review
Working capital	Inventory and debtor review	Balance and ageing
Workforce capability	Training and supervision	Coverage and hours
Reporting integrity	Shared data definitions	Reconciliation record

This matrix organises the fictional group’s risk discussion. It records the exposure, the proposed management response and the evidence needed at the next review. The categories are illustrative; they are not a measured assessment of a real organisation.

A useful risk register should change when circumstances change. Actions without an owner or a review point should be treated as incomplete, even when the language sounds reassuring.

OUTLOOK

What the next review needs to answer.

A plan is only useful when its open questions remain visible.

BEFORE COMMITMENT

Confirm the scope, owner and funding.

DURING DELIVERY

Track exceptions, cost and readiness.

AFTER START-UP

Compare the result with the original need.

The report does not provide a numerical forecast. The next-period agenda is framed as decisions management must resolve: whether the capital programme is ready, whether additional capacity produces the expected operating benefit and whether working capital remains controlled.

The three review points below are linked to information already shown in this report. They give the reader a way to inspect the next period without treating today’s synthetic results as a prediction.

LOGISTICS

Keep the network moving.

A sequence of handoffs creates the operating result.

1 Receive	2 Sort	3 Dispatch

chuttersnap / CC0 / Singapore terminal reference

Logistics coordinates the movement of goods through a fictional network of receiving, sorting and dispatch activities. The model gives the division £480m of revenue and £108m of operating profit in 2026. Its role in the group is to turn scheduled work into dependable delivery.

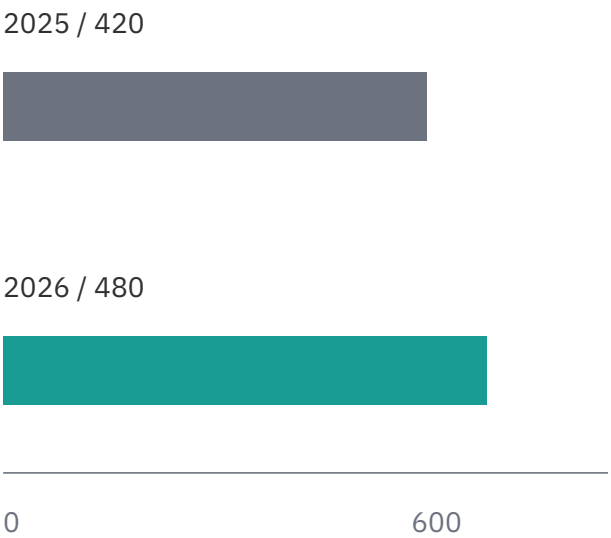

The native network diagram on page 16 shows a conceptual handoff sequence. It does not depict a real port, route or customer contract. The performance comparison separates revenue growth from the margin needed to support operations.

LOGISTICS

Volume is only part of the comparison.

Logistics / performance

Revenue / £m

Measure	2025	2026
Revenue / £m	420	480
Profit / £m	100	108
Margin	23.81%	22.5%
Capex / £m	60	75

Revenue +£60m

Margin −1.31 pp

Revenue increased by £60m, from £420m to £480m. Operating profit increased by £8m, from £100m to £108m. Operating margin moved from 23.8% to 22.5%. The division’s growth therefore came with a lower profit contribution per pound of revenue.

The comparison does not identify a single cause. Pricing, service mix and operating cost would require a more detailed real dataset. This model deliberately stops at the numbers it can reconcile; it does not fabricate an explanation from absent evidence.

LOGISTICS

Make the handoff inspectable.

Logistics / operating model

1 Receive / confirm specification

2 Sort / establish next destination

3 Dispatch / record custody

4 Review / inspect exceptions

A received job needs a confirmed specification before it enters the operating queue. Sorting establishes the next destination. Dispatch records custody, timing and exceptions. Review then checks where delays or rework occurred.

The four stages give managers a common language for following work. The diagram remains intentionally conceptual: it demonstrates editable information design without inventing a real terminal plan, route distance or geographic location.

LOGISTICS

Protect the work already in motion.

Logistics / next decisions

The division receives £75m of the capital programme. The operational question is which capacity constraint that spending addresses and how existing work will continue during implementation. A new asset creates little value if the handoffs around it remain unclear.

The review agenda should pair financial progress with readiness evidence: staffing, maintenance, exception handling and the date at which the new capacity can be used. The report does not claim an improvement before that evidence exists.

ENERGY

Build capacity with a review point.

Energy / divisional overview

KARSTEN WÜRTH / CC0 / CONTEXT IMAGE

Energy accounts for £360m of revenue and £70m of operating profit in the model. It receives £80m of capital expenditure, the largest divisional allocation. The central management question is whether the spending addresses a defined operating need.

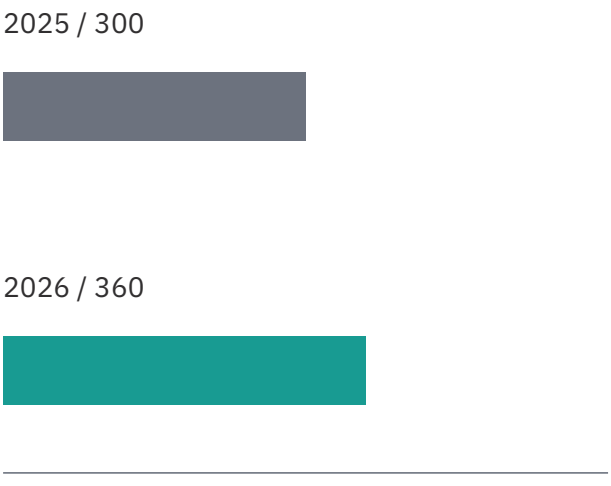

The photograph is context imagery of wind turbines in Germany, not evidence of Calloway ownership or generation capacity. The report uses a separate native asset diagram to explain the conceptual operating sequence.

ENERGY

Growth and investment belong together.

Energy / performance

Revenue / £m

Measure	2025	2026
Revenue / £m	300	360
Profit / £m	60	70
Margin	20%	19.44%
Capex / £m	50	80

Revenue +£60m

Margin −0.56 pp

Revenue increased from £300m to £360m. Operating profit increased from £60m to £70m, while margin moved from 20.0% to 19.4%. Capital expenditure increased from £50m to £80m. These measures describe different aspects of the year.

An investment programme should not be judged by spending alone. Readiness, maintenance requirements and the subsequent operating result are distinct review points. The model contains no generation output or installed capacity claim.

ENERGY

An asset is part of an operating chain.

Energy / asset model

The conceptual chain links an operating asset to monitoring, maintenance and the customer requirement. Each step needs information that the next team can use. Asset availability is a management question, not an assumption established by a photograph.

The native diagram uses equal-size modules to describe responsibilities. It is not an engineering drawing, grid-connection plan or map. Its purpose is to make the review sequence readable and editable.

ENERGY

Define the operating boundary first.

Energy / next decisions

The division’s financial figures are shown separately from the group’s environmental measures. Energy consumption in the people and sustainability section covers the constructed group-wide operating boundary. It should not be read as Energy’s generation output.

Before a real organisation compares environmental performance, it needs a stable boundary, consistent units and a clear treatment of acquisitions or changing activity. Page 31 states the simplified boundary used here.

SERVICES

Make delivery repeatable.

Services / divisional overview

ADI GOLDSTEIN / CC0 / WORKSHOP REFERENCE

Services organises people, systems and operating support around customer needs. It contributes £280m of revenue and £42m of operating profit in the current-year model. The workshop photograph provides operating-support context, not evidence of Calloway staff or facilities.

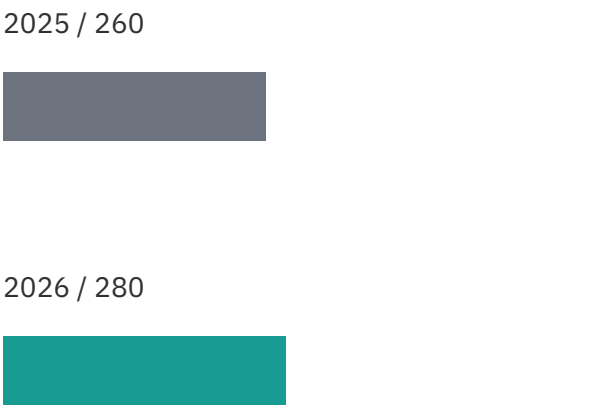

The division’s operating sequence begins with a defined scope, continues through delivery and ends with a structured review. Page 24 makes the handoff visible, while page 25 focuses on scope and renewal decisions.

SERVICES

A modest increase, a visible margin change.

Services / performance

Revenue / £m

Measure	2025	2026
Revenue / £m	260	280
Profit / £m	40	42
Margin	15.38%	15%
Capex / £m	30	25

Revenue +£20m

Margin −0.38 pp

Revenue increased from £260m to £280m. Operating profit increased from £40m to £42m. Margin moved from 15.4% to 15.0%. The comparison makes clear that a higher revenue total does not necessarily improve the operating margin.

The synthetic model allocates £25m of capital expenditure to Services, compared with £30m in the prior year. The report does not infer a real technology investment, customer count or contract renewal rate from those totals.

SERVICES

Scope, deliver, review.

Services / operating model

1	Define scope
2	Deliver the work
3	Record exceptions
4	Review the result

A useful service engagement begins with the decision or operating need the customer wants to address. The scope records responsibilities and the information needed. Delivery then follows an agreed sequence, with exceptions reported before they become invisible.

Review asks whether the work answered the original need and what should change in the next cycle. The native diagram is a fictional process demonstration; it is not a promise about a real provider’s service levels.

SERVICES

Make the renewal a decision.

Services / next decisions

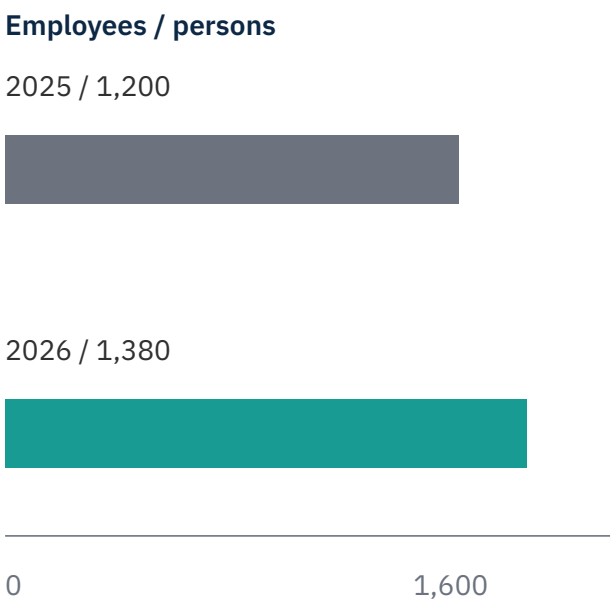

A renewal should revisit the operating requirement, the work completed and the unresolved issues. Repeating the original scope without that review risks preserving activity that no longer answers the customer’s need.

The next-period agenda should distinguish continuing work from changed requirements. Financial comparisons remain useful, but they cannot replace a clear account of what the service is intended to do and who accepts its result.

PEOPLE

Growth changes the supervision task.

Employees increased from 1,200 to 1,380.

Headcount	2025	2026
Logistics	600	680
Energy	360	420
Services	240	280
Group employees	1,200	1,380

The model allocates 680 employees to Logistics, 420 to Energy and 280 to Services at year end. The totals sum to 1,380. They are constructed headcounts, not survey responses or independently verified workforce records.

A larger workforce creates a larger coordination task. Managers need to make supervision, onboarding and escalation clear. The report does not substitute a headcount increase for evidence about employee experience.

LEARNING

Hours need a denominator.

Training reached 18 hours per employee in the model.

18,000

2025 training hours / 1,200 employees

24,840

2026 training hours / 1,380 employees

18 hours

2026 hours per year-end employee

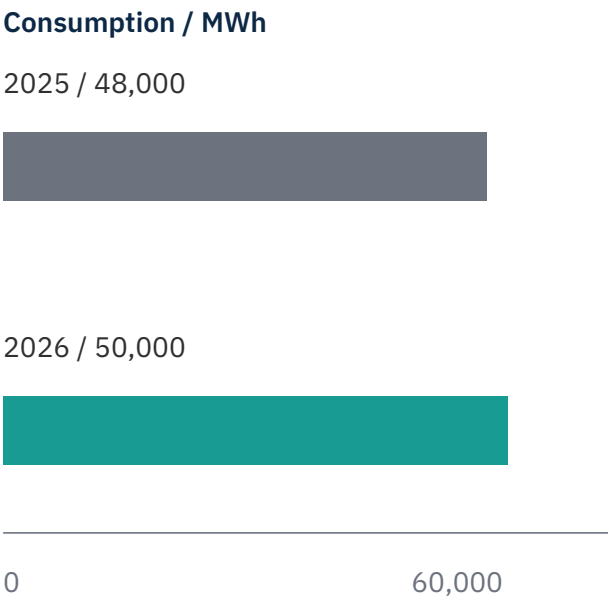

Total training hours increased from 18,000 to 24,840. Dividing by year-end headcount gives 15 hours per employee in 2025 and 18 in 2026. This simple denominator is disclosed because average headcount would produce a different measure.

The example does not claim course completion, competence improvement or employee satisfaction. Those measures would require their own data. Hours are an activity measure; a real review should also ask whether the learning was relevant and used.

SUSTAINABILITY

More activity, more energy.

Group energy consumption rose from 48,000 to 50,000 MWh.

Measure	2025	2026
Energy / MWh	48,000	50,000
Intensity / MWh per £m	48.98	44.64

The absolute consumption total increased by 2,000 MWh. Revenue increased more quickly, so energy per million pounds of revenue declined. The two measures answer different questions and are presented together.

A lower revenue-based intensity is not the same as lower absolute energy use. The report contains no carbon conversion factor, renewable-energy percentage or verified emissions inventory. Those claims cannot be inferred from the consumption totals.

RESOURCE USE

Intensity is a ratio, not an outcome.

Read the numerator and denominator together.

Energy intensity is 48.98 MWh per £m of revenue in 2025 and 44.64 in 2026, rounded to two decimals. The numerator increased while the denominator increased faster. This is why the ratio declined even though absolute consumption rose.

The ratio is useful only within its defined boundary. It is affected by pricing, business mix and the chosen revenue measure. The report does not use the ratio to claim avoided emissions or a measured environmental benefit.

44.64

MWh per £m revenue / 2026

SAFETY & QUALITY

Controls have to reach the work.

Four routines for an operating team.

- **CHECK** — Confirm the work and its requirements.
- **RECORD** — Keep decisions and exceptions traceable.
- **ESCALATE** — Bring unresolved risks to a named owner.
- **REVIEW** — Compare the result with the original need.

The report describes a proposed control framework rather than a measured safety result. It deliberately avoids invented accident-free periods, certifications or satisfaction scores. Each routine below can be represented by a native icon and a plain-language action.

A real implementation would require owners, evidence and escalation thresholds. The annual report's role is to show what would be reviewed and where the information belongs, not to imply that a drawn icon proves compliance.

MEASUREMENT

State the boundary before the result.

People and environmental methodology.

Measure	Unit / denominator	Boundary
Employees	Year-end persons	Three divisions
Training	Total hours	Three divisions
Hours per employee	Total / year-end headcount	Three divisions
Energy	MWh consumed	Group operations
Energy intensity	MWh / £m revenue	Group operations

The operating measures use the same three-division boundary as the synthetic financial model. Employees are year-end headcounts. Training records are constructed total hours. Energy is group operational consumption in MWh, with no emissions conversion applied.

These are illustrative management measures. There was no survey, site inspection or external assurance exercise. Methodology changes in a real report should be explained before comparing periods.

GOVERNANCE

Authority with a visible review route.

Governance should connect decisions to evidence.

1 **Board oversight**

2 **Executive coordination**

3 **Divisional delivery**

The fictional governance structure separates the board’s oversight role from executive coordination and divisional delivery. Reporting moves back through the same route, so a decision can be inspected by the people responsible for it.

The native chart describes accountability, not a legal corporate structure. The report makes no claim about compliance with a real listing regime, external audit standard or professional code.

BOARD

Roles before biographies.

A fictional board designed around the review task.

MC / Mara Calloway

Chair / board agenda and oversight.

JB / Jon Bell

Chief Executive / group delivery.

AL / Anika Lane

Finance Director / statements and funding.

RO / Rowan Orr

Board member / operating review.

This type-led board section avoids attaching invented qualifications to real photographs. The names are fictional and the descriptions identify responsibilities within the model. No professional memberships, awards or independent-status assertions are made.

The design gives each role a consistent space and leaves the responsibility visible. A real report would include verified appointment dates, interests and required disclosures.

REMUNERATION

Pay belongs inside the cost picture.

Illustrative executive remuneration, £m.

Measure / £m	2025	2026
Executive fixed pay	0.8	0.9
Executive variable pay	0.4	0.5
Executive total	1.2	1.4
All staff cost	60	75
Operating cost / inclusive	780	900

The model shows executive fixed pay of £0.9m and variable pay of £0.5m in 2026, totalling £1.4m. The prior-year total is £1.2m. These amounts are included within staff cost, which is included within operating cost; they are not additional expenses.

The table is a design and reconciliation example. It is not a recommendation about pay levels or a claim about an actual company’s remuneration policy.

REVIEW CYCLE

A calendar for accountable decisions.

Four review points, with evidence attached.

PLAN

Agree the operating need and budget.

OPERATE

Inspect delivery, cost and exceptions.

FUND

Review cash, borrowing and commitments.

REPORT

Reconcile the narrative and statements.

A governance calendar should connect the timing of decisions to the information needed. The fictional cycle below follows planning, operating review, funding review and annual reporting. It does not describe meetings that actually took place.

A real record would identify attendance, decisions and actions. The proposed sequence demonstrates how recurring governance information can be organised without inventing minutes or third-party approvals.

FINANCIAL STATEMENTS

Read the statements as one model.

A reconciled synthetic financial section.

Note	Purpose	Page
1 / Basis	Units and model construction	41
2 / Segments	Three divisions to group	42
3 / Assets	Capex and non-cash charges	43
4 / Funding	Debt, cash and net debt	44
5 / Measures	Tax, EBITDA and definitions	45

The following statements use £m except where a different unit is stated. They cover two constructed years and three fictional divisions. There is no unallocated corporate expense line, acquisition, foreign-exchange movement or other comprehensive income in this simplified example.

This is not an IFRS compliance statement and no audit opinion is provided. The notes explain the model's assumptions and reconcile the recurring measures used throughout the publication.

FINANCIAL STATEMENTS

Income statement.

Years ended 31 December / £m

Measure / £m	2025	2026
Revenue	980	1,120
Operating cost	780	900
Operating profit	200	220
Finance cost	20	25
Profit before tax	180	195
Tax expense	45	48.75
Profit for the year	135	146.25

Revenue of £1,120m less operating cost of £900m gives operating profit of £220m. Finance cost of £25m leaves profit before tax of £195m. The constructed tax expense is 25% of that amount, leaving profit of £146.25m.

Operating cost includes depreciation, staff cost and executive remuneration. These components are disclosed in the notes and should not be added to the total again.

FINANCIAL STATEMENTS

Financial position.

At 31 December / £m

Assets

Measure / £m	2025	2026
Tangible assets	500	610
Intangible assets	60	50
Inventory	90	100
Receivables	150	170
Cash	220	256.25
Total assets	1,020	1,186.25

Liabilities and equity

Measure / £m	2025	2026
Bank borrowing	260	300
Other borrowing	60	80
Trade payables	100	100
Total liabilities	420	480
Share capital	200	200
Retained earnings	400	506.25
Total equity	600	706.25

Assets of £1,186.25m equal liabilities of £480m plus equity of £706.25m. The current-year asset total includes £256.25m of cash, which matches the closing balance in the cash-flow statement.

The model uses bank borrowing and other borrowing rather than lease liabilities. The two borrowing categories sum to gross debt of £380m.

FINANCIAL STATEMENTS

Cash flow.

Years ended 31 December / £m

Measure / £m	2025	2026
Opening cash	160	220
Profit for the year	135	146.25
Depreciation / amortisation	60	80
Inventory / receivable movement	(15)	(30)
Operating cash	180	196.25
Investing / capex	(140)	(180)
New borrowing	60	60
Dividend	(40)	(40)
Financing cash	20	20
Net cash movement	60	36.25
Closing cash	220	256.25

Operating cash is profit plus non-cash depreciation less the increase in inventory and receivables. Payables are unchanged. Tax and finance cost are treated as paid within the operating result in this simplified model.

Capital expenditure is a cash investing outflow. Financing consists of additional borrowing less the dividend. Net cash movement of £36.25m takes opening cash of £220m to closing cash of £256.25m.

FINANCIAL STATEMENTS

Changes in equity.

Years ended 31 December / £m

Measure / £m	2025	2026
Opening equity	505	600
Profit for the year	135	146.25
Dividend	(40)	(40)
Closing equity	600	706.25
Closing share capital	200	200
Closing retained earnings	400	506.25

The model has unchanged share capital of £200m. Profit is added to retained earnings and the dividend is deducted. No share issuance, repurchase or other comprehensive income is assumed.

Opening 2026 equity of £600m plus profit of £146.25m less the £40m dividend gives closing equity of £706.25m. This is the same balance shown in the statement of financial position.

NOTE 1 / BASIS

How the model was constructed.

Illustrative basis, units and scope.

The financial model was written as a deterministic two-year dataset. Divisional revenue, operating profit and capital expenditure were set first. Group totals were calculated from those divisions. Asset, funding and equity balances were then constructed to reconcile with profit, distributions and cash movement.

A share count of 100 million is used in both years. Profit divided by that count gives earnings per share of £1.35 in 2025 and £1.4625 in 2026. This is arithmetic within a fictional model, not an actual security or investment proposition.

There is no real auditor, assurance conclusion or research citation behind these values.

NOTE 2 / SEGMENTS

The three divisions reconcile to the group.

Revenue and operating profit / £m

Division / £m	Revenue 2025	Revenue 2026	Profit 2025	Profit 2026
Logistics	420	480	100	108
Energy	300	360	60	70
Services	260	280	40	42
Group	980	1,120	200	220

The division table is the source for the performance comparisons on pages 15, 19 and 23. The group has no separate unallocated operating-cost line in this model, so divisional operating profit sums directly to the consolidated amount.

Revenue and profit remain distinct measures. Use the same period and denominator when calculating margin, and retain unrounded values for calculations.

NOTE 3 / ASSETS

Follow capital into the asset balance.

Current-year asset roll-forward / £m

Asset / £m	Opening	Additions	Charge	Closing
Tangible assets	500	180	(70)	610
Intangible assets	60	0	(10)	50
Total	560	180	(80)	660

Tangible assets open at £500m. Capital expenditure adds £180m and depreciation removes £70m, leaving £610m. Intangible assets open at £60m and amortisation removes £10m, leaving £50m.

The two non-cash charges total £80m, the amount used in EBITDA and the cash-flow reconciliation. The simplified model assumes no disposal proceeds, impairment or acquisition.

NOTE 4 / FUNDING

Cash and debt belong on the same page.

Funding position / £m

Measure / £m	2025	2026
Gross borrowing	320	380
Cash	220	256.25
Net debt	100	123.75
Finance cost	20	25

Gross debt is bank borrowing plus other borrowing: £320m in 2025 and £380m in 2026. Subtracting cash gives net debt of £100m and £123.75m respectively.

Cash increased by £36.25m while gross debt increased by £60m. The difference explains the increase in net debt. The model does not assign maturities, interest-rate covenants or credit ratings to the fictional borrowing.

NOTE 5 / MEASURES

Definitions prevent double counting.

Tax, alternative measures and rounding

Measure	Definition	2026
Tax / £m	25% x profit before tax	48.75
EBITDA / £m	Operating profit + non-cash charges	300
Operating margin	Operating profit / revenue	19.6%
EPS / £	Profit / 100m shares	1.4625
Training hours / employee	Hours / year-end employees	18
Energy intensity	MWh / £m revenue	44.64

EBITDA is operating profit plus depreciation and amortisation. Operating margin is operating profit divided by revenue. Neither definition changes the statutory-looking statement totals in this illustrative publication.

The tax rate is a constructed 25% assumption, not a statement of applicable law. Calculations use unrounded values. Money is shown to two decimals where needed, percentages to one decimal and energy intensity to two decimals.

SHAREHOLDER INFORMATION

A guide to the terms.

Fictional shareholder information and glossary.

Term	Meaning
Operating profit	Revenue less operating cost.
EBITDA	Operating profit plus non-cash asset charges.
Capex	Cash spending on tangible assets in the model.
Net debt	Gross borrowing less cash.
Equity	Share capital and retained earnings.
EPS	Profit divided by the constructed share count.
Intensity	A measure divided by a stated activity denominator.

The model uses 100 million shares solely to demonstrate an earnings-per-share calculation. No shares are offered, traded or registered. There is no operational investor portal, meeting invitation or dividend-payment instruction.

The glossary defines the terms used in the report. Any real shareholder communication would need verified legal, registry and market information before publication.

CONTACT & CREDITS

Information with a clear source.

Calloway Holdings / publication information

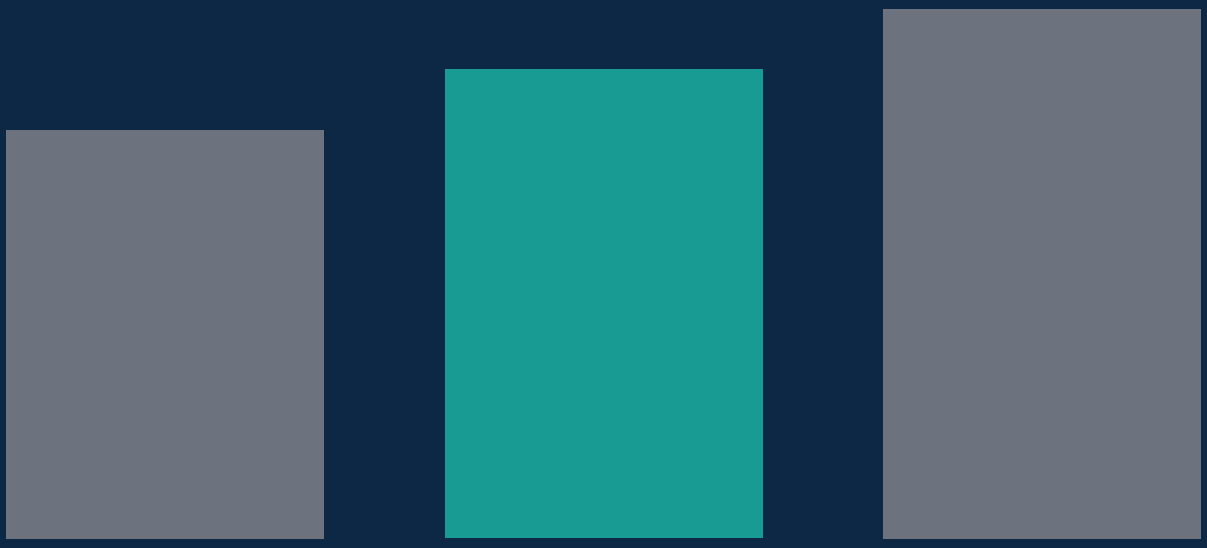

General enquiries: information@calloway-report.example
Investor information: investors@calloway-report.example
Both addresses are non-operational examples.
No enquiry, investment or subscription action is offered.
This fictional annual report was designed and constructed as a native InDesign publication. All diagrams, charts, tables and decorative forms remain editable.

Financial and operating data: original synthetic model in CONTENT/model.json.
Wind photograph: Karsten Würth, Mölsheim, Germany, sourced through Wikimedia Commons under CC0.
Workshop photograph: Adi Goldstein, CC0; source depicts hands at a drill press. Context imagery does not document Calloway assets.
Type: Source Serif 4 and IBM Plex Sans, original files under SIL OFL. Full sources and licences are included with the editable files.
